Summary

Data Analyst with 5+ years of freelance experience specializing in end-to-end data engineering, modeling, and visualization. Proven track record of translating complex business problems into actionable insights using SQL, Python, and modern data warehousing tools (BigQuery, Snowflake). Expert in building governed data pipelines with dbt and Airflow, and creating high-impact dashboards in Power BI and Tableau. Committed to delivering clean, reproducible code and data-driven strategies that directly impact revenue, operational efficiency, and customer retention. Available for full-time and contract engagements.

• Hourly Rate:** $45/hour

Skills

• Data Engineering & Modeling:** SQL (Advanced), Python (pandas, NumPy, scikit-learn), dbt (core, tests, docs), Airflow (DAGs, Scheduling), ETL/ELT Pipelines.

• Data Warehousing:** Google BigQuery, Snowflake, Redshift. Experience with partitioning, clustering, and query optimization.

• Visualization & BI:** Power BI (DAX, Power Query, Service), Tableau (LOD Expressions, Calculated Fields), Excel (Advanced).

• Statistics & Machine Learning:** Regression analysis, classification models (Random Forest, XGBoost), A/B testing, cohort analysis, time-series forecasting.

• Tools & Platforms:** Git/GitHub, Jupyter Notebooks, Google Looker, GA4, Jira, Slack.

Selected Projects

• Enterprise Data Warehouse Migration & dbt Governance** | *2025*

• Led the migration of legacy stored procedures to a modular dbt project on BigQuery for a SaaS client.

• Implemented comprehensive data tests and documentation standards using dbt.

• Outcome:** Reduced average query execution time by 40% through optimized partitioning and materialization strategies.

• Subscription Revenue Attribution & LTV Modeling** | *2024*

• Developed a multi-touch attribution model using DAX in Power BI connected to BigQuery historical data.

• Analyzed customer lifetime value (LTV) across different acquisition channels to guide marketing spend.

• Outcome:** Identified 12% over-allocation to low-performing channels, enabling reallocation of budget to high-ROI sources.

• Supply Chain Delay Prediction & Route Optimization** | *2024*

• Built a predictive model in Python to forecast delivery delays based on historical logistics data and weather patterns.

• Integrated the model into an Airflow pipeline that automatically flags high-risk shipments.

• Outcome:** Reduced late deliveries by 18% by allowing dispatchers to proactively adjust routes.

• Churn Prediction & Cohort Retention Dashboard** | *2023*

• Created a churn prediction model using Python and scikit-learn, integrated into a dbt workflow.

• Developed a Tableau dashboard for the customer success team to monitor at-risk cohorts.

• Outcome:** Achieved 82% F1-score on validation set, enabling targeted retention campaigns.

• Loan Default Risk Scoring System** | *2023*

• Engineered features from unstructured loan data and built a risk scoring model in Snowflake.

• Collaborated with finance teams to validate model performance against historical defaults.

• Outcome:** Reduced bad debt by 8% year-over-year through stricter pre-approval criteria.

• E-commerce Conversion Funnel & Cart Abandonment Analysis** | *2023*

• Analyzed GA4 data to identify friction points in the checkout process.

• Built a Power BI dashboard to track funnel conversion rates in near real-time.

• Outcome:** Reduced cart abandonment rate from 72% to 65% via UX improvements informed by data.

• Real Estate Portfolio Valuation & Market Trend Analysis** | *2023*

• Automated data collection from public housing records using Python scripts.

• Built a Tableau visualizer to compare portfolio performance against local market trends.

• Outcome:** Improved valuation accuracy by 12% by incorporating micro-market data.

• Real-Time Ad Spend Optimization Dashboard** | *2022*

• Developed a Python ETL script to ingest ad platform data and sync to BigQuery.

• Created a Tableau dashboard for marketing managers to monitor ROI in real-time.

• Outcome:** Saved 10 hours/week of manual data entry and reporting for the marketing team.

Experience

• Freelance Data Analyst**

• Self-Employed | Austin, TX*

• Jan 2021 – Present*

• Provide data engineering and analytics consulting to SaaS, logistics, and fintech clients.

• Design and implement ELT pipelines using dbt and Airflow, ensuring data quality and reproducibility.

• Develop interactive dashboards in Power BI and Tableau that serve executive and operational stakeholders.

• Conduct statistical analysis and build predictive models to solve business-specific challenges.

• Senior Data Analyst**

• FinTech Solutions Inc. | New York, NY*

• Jun 2019 – Dec 2020*

• Managed SQL databases to support loan origination and risk assessment workflows.

• Built automated reporting pipelines using Python and Excel VBA, reducing manual reporting time by 30%.

• Collaborated with product teams to define KPIs and dashboard requirements for new lending products.

• Business Intelligence Analyst**

• Global Logistics Corp. | Chicago, IL*

• May 2018 – May 2019*

• Created Tableau dashboards to track fleet performance and supply chain metrics.

• Wrote complex SQL queries to extract and transform data from Oracle databases.

• Presented monthly performance reviews to senior management, highlighting areas for operational improvement.

Education

• Bachelor of Science in Statistics**

• University of Texas at Austin | Austin, TX*

• Graduated: 2018*

Certifications

• Microsoft Certified: Power BI Data Analyst Associate (PL-300)

• Google Cloud Professional Data Engineer

• dbt Certified Data Analyst
